NetENV Releases NetVidi Professional

Denver, CO — NetENV LLC., a leading provider of network management tools, has released the Professional version of its NetVidi network management, monitoring and reporting tool. The Professional version enhances features found within the Standard version, in addition to providing additional capabilities as a result of top-line customer requests. These features include: task scheduling, automated network mapping, regulatory compliance reporting, vendor best practice reporting and security assessment.

"The NetVidi product line is evolving rapidly," said Kevin Hofstra, Co-Founder of NetENV LCC. "Adding regulatory compliance and security reporting fulfills our most frequent customer requests, and the new automated mapping/visualization features provide an unparalleled value not seen in any other network management tools at the NetVidi Professional price point. The NetVidi product line now provides the fundamental network management capabilities features in the Standard version, along with the advanced configuration management and network health/security assessment capabilities in the Professional version...both at a price well below industry norms."

NetVidi Professional enhances the NetVidi product line by providing the following new features:

- Task Scheduling
- Network Diagraming
- Automated Reporting
 - Regulatory Compliance
 - Performance and Optimization
 - Vendor Best-Practice Reporting
 - Vulnerability and OS Integrity

Pricing and Availability

NetVidi Standard (*MSRP \$29.00*) and NetVidi Professional (*MSRP \$399.00*) are now available for digital download starting May 18th, 2014. All software packages include 1 year of software maintenance/support. For more information, or to purchase, please visit:

About NetENV

NetENV (Pronounced "net envy") LLC was founded in 2013 by 4 network engineers with a common passion for developing tools and techniques that enable more effective management of network devices. Our goal is to create simple and affordable solutions that enhance the capabilities of network administrators. Our initial product, NetVidi, enables network administrators to more effectively manage the network by combining network discovery, device management and custom reporting in a lightweight, simple and affordable package.
